Hello,

this is a modell of the NES controller. As it is 1:1 scale you might have to scale up or use a 0.2 mm Nozzel to improve print quality.

The Fotos are sadly not quite up to date I have improved the test quality and addet arrows to the D-pad and carved out the Start select button box for more similarity between the model and the originell. Sadly I am out of read pla witch will post pone the uptadet pictures. So if you have a good photo to share, i would be honerd to change the photos. I have also made a cable witch u can attatch to the top hole. U might have to drill out the hole for better fit. Other than that happy printing.
