### Summary

Cool CounterStrike Coin with NFC compartment

[Gadgets](#) > [Video Games](#)

Tags: [coin](#) [counterstrike](#) [csgo](#) [cs2](#)

Cool CounterStrike Coin that has a cavity for NFC Tags inside.  
Can be used as a personalized LAN Party token or similar.  
Prints good in PLA on the MMU3.  
Activated Ironing for the Top Surface for a better Coin finish.

For the NFC Part that is optional buy Paper NFC Stickers 1inch/25mm and set a Break after Layer 5 (for 0.4mm Nozzle and 0.2mm Layer height).  
With those tags you can trigger custom mobile phone automations for example.

Details look better with 0.4mm Nozzle but also looks good with 0.6 Nozzle.  
If you enjoy it please like and post makes :)
