updated 14. 7. 2024 | published 14. 7. 2024

### Summary

Wall mounted helmet holder that puts pressure on the inside of the helmet, not on the neck.

This is the v2 updated version! (Old version: thing:6591051)  
I learned how to use OnShape and wanted to redo this design as I quite like it.

I couldn't find a helmet holder that wasn't bulky or one that didn't put pressure on the foam that touches the neck and didn't want that foam to flatten so I designed my own.

I designed this holder to put the pressure just above neck foam as that part doesn't touch your head so it shouldn't matter if that foam flattens eventually.

Living in a rented unit I also designed it to use two large Command strips to be make it removable.

I have also made a version with 2 screw holes but this one is untested, would be happy to hear anyone's results if they print this.

Designed to print without supports. It printed fine on my Ender 3 v2 which usually gives poor results.
