Check new version, - Dummy 13 v1.0 in scale - it's highly recommended if you just starting new print!

It's full set of parts to print excellent Dummy13 by [@soozafone](#) in 500% scale. This remix fixes most of the problems you could get if tried this scale. I believe this will work also for 300%-700% scale. Tested on A1 Mini.

Also, it contains fully rebuild hands: fingers are with articulated joints and printed in one piece (it's pain to assemble them in this scale when printed separately). Finger-palm joints separated.

You'll need 0.6kg for skeleton and 0.75kg of filament for armour.

Before printing this model, I suggest to print [posable hand model](#) to verify filament and printer settings.

For frame, use PETG, ASA, etc. PLA will get loose over time in joints because of creep.

If you already printed in PLA, [use inserts printed in PETG or ASA](#)

UPD: v1.1 Skeleton files updated (palm-finger joints were too loose, also redone finger joints)

UPD: v1.2 Added inserts for Joints+.

Reviews and prints of my scaled models:
