I designed this nozzle holder to fit 2 A1 series nozzles. This model does not use supports. You can print the case and the letters in

different colors using **Make Anything's Multipass technique** even if you don't have AMS! Please watch from **1:22** in the video if you aren't using a print profile. The case uses cone hinges and a latch to open and close. If you like this model, don't forget to give it a like! Make sure to follow for more awesome 3D models like this one!

If you want to sell physical prints of our models, consider subscribing to our **membership** on Thangs3D.

Have a Bambu Lab? Pre-sliced 3MF files are included!
