Summary

A replacement piece for the connectors for the trunk shelf in Toyota C-HR.

Tags: [car](#) [trunk](#)

A replacement piece for the connectors for the trunk shelf in Toyota C-HR, could work for other cars but I haven't tested. It is not required to glue the piece in place, but I would highly recommend to do so.

Print instructions:

- .2 mm layer height
- PLA/PETG
- 20% infill

I would recommend to print it like this with manually painted tree supports at the same spots as in the image:
