### Summary

Need a small shelf? Need a place to store that one thing? How about both in one?!

Another 3D printed shelf but with a secret! Ok, maybe not that big of a deal... But it's super handy! After mounting with 3 countersunk screws, the top half snaps on very satisfyingly and slides out with a hard stop to avoid falling off! I made this one for my department's shared restroom to store my Dude Wipes and the ladies can stash their feminine products if they wish to. This could be a great way to hide something or just store something in the perfect location with elegance!

**Print the STLs as oriented - bottom half, bottom side down - top half, top side down**

**I hope you find this print useful and please post your makes!**

**Full Bed Width: 220mm in my case - Scale as needed**

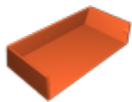

**Layer Height: 0.2mm - Lower for finer layer lines**

**Perimeters/Walls: 3 - Add more for more strength**

**Infill: 10% - Increase for more strength**

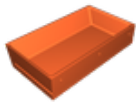

**Brim: Highly Recommended - Corners will try to lift**
