## Summary

Simple 2-piece handle for Ball Vape Heating Coils

I don't like the look of wood handles for ball vape heater coils, so i ordered mine without a handle and just designed a nice roundish (but not completely round) handle myself. This fits heating coils with a 8/9mm metal tube (see photo).

The two halves are held together with M3x20 bolts and M3x5x4 heat set inserts (4 of each).

The design is a pretty tight fit, but thanks to the bolts and inserts you'll be able to lock the metal tube into place very securely - so make sure to align the heating coil properly before tightening the bolts.

ProTip if you have a loose cable sleeve: Put everything in place - but don't tighten the bolts yet - and gently twist the cable sleeve where it exits the handle. That should make sure it doesn't get pinched by the edges of the channel while tightening the bolts.
