Summary

Here is a concept of 3d printing an tripod. This is still in a development to make the joint less wobble.

Here is a concept of printing a camera tripod (the one you can easiler buy from any retailer) and make it printable on a FDM 3d printer. The model is designed to be print in place.

The model is currently under development and I will not release any stl file, I do not want to waste anyone time and filament printing a half bake model.
