### Summary

A way for a TL60 led tube to stand on the ground, even with a hole for its cable to run from a power outlet

[Gadgets](#) > [Photo & Video](#)

Tags: [led](#) [lights](#) [tube](#) [godox](#)

I increase the length and thickness of the base so that it can better support the weight of the led tube, it can still be knock over but the more infill the better stability it will have, there's a hole as well so that you can run the light directly out of a power outlet, its perfect for when you need to have the light stand perpendicular.

Recommend printing it with the vase facing down and 25 infill and up for more weight.
