Summary

Don't know how to weld? Don't want to wait on some weird Flange with bad welds from Ebay? Why not 3D print it?

This BOV Flange will fit any GReddy Type S or newer GReddy BOV. I tested with the GReddy FV II.

This particular model is compatible with 2.5" inner diameter intake piping. I can make a bigger or smaller version at request.

I have tested using Mishimoto Hose Clamps going as tight as I can physically make them go. There is no cracking.

Since this is a hot part, ensure you are using ABS or better. Nylon would be preferable.

I have only tested on the cold side of the intercooler. If someone is more brave than I am, please let me know your results using it on the hot side.
