\*\*\*Edit - 01 May 2022: There are two sizes of this set on the market! To find the size of your set(small, big), measure the straight pry tool from end to end. If it measures 156mm from end to end you own the big set and you should print file "pry\_tools\_holder.STL" . If it measures 132mm from end to end you own the small set and you should print file "pry tools holder\_Small set.STL" . Thanks to user JW693D for the feedback.

Pry tool holder for the classic "4PCS Car Pry Tool Kit" .

It is designed so that the pry tools snap in place.

Each of the 4 pry tools has different dimensions(width and depth) so advice the pictures(and common logic) for correct placement and snap-in.
