Tags: [bike](#)

One of the biggest problems of the genesis vagabond is its lack of any mudgaud attachment points. This print solves the issue by adding an M5 screw thread to rear seat stay bridge.

It attaches securely to the bike with 4 2.5mm width zipties. A short M5 screw should be used in conjunction with as many washers as are required to ensure the screw doesn't bottom out.

Prints in the orientation it has in the slicer with supports.

0.2mm layer height or less is recommended.
