A variety of handles for the Adventurer 5M. Both front door and matching top lid handles are available. 5mm x 3mm magnets (x3) are required per front door handle. the handles use the same 2.9mm screws from the enclosure kit. Print the low poly and round handle on the handle opening with a few supports on the magnet component. The knurled knob should be printed upside down with a few supports on the magnet component as well. Magnets are a tight press fit. A small pair of pliers can help press them in, if needed.
