## Summary

This 2x3 module holds two stubby screwdrivers and is compatible with Zack Freedman's Gridfinity system.

I have printed this model on my Ratrig V-Core 3.1 with an 0,4 mm nozzle. I Used the 0,28 mm layer height preset with 5% infill.

The modell is plenty strong with these settings.

I used Orca-Slicer to emboss the text onto the modell.

I include the .step file so you can modyfy it for your needs.
