updated 26. 7. 2024 | published 26. 7. 2024

### Summary

I made this thick case for your Realme. Dimensions: 162x80x15mm. DM me if you'd like me to customize this model for you.

Hey there!

I made this thick phone case for your Realme or any other phone with a similar shape. The case is more than 100% thicker than the original one so it should withstand more falls without damaging the phone's body. The cut-out design helps to dissipate heat from the battery. The first image is a rendered visualisation showing how the case would look on a Realme GT Master Edition. When printing, please be aware of the protruding part near the camera island. If you want me to change anything in the model, feel free to contact me. I can do it for you unless it requires re-doing significant steps in the design process.

Please notice that I'm not an owner of a 3D printer, so the model itself and the printing settings haven't been tested before. However, I hope that my work could help anyone and someone. I would really appreciate any sort of feedback in order to improve my future projects.

Thank you for checking out my model and I really hope it meets your expectations!
