

Quiet RG35XXSP Membrane Inserts

8 8-Bit Drip

[VIEW IN BROWSER](#)

updated 26. 7. 2024 | published 26. 7. 2024

Summary

A wonderful handheld was ruined by obnoxiously loud buttons. This makes it much quieter.

Tags: [anbernic](#) [rg35xx](#) [rg35xxsp](#)

There are two files, a version that is .8mm thick and a version that is .6mm thick.

The .8mm version is almost silent, but the buttons are a little stiff.

The .6mm version has a soft audible click, but the buttons feel a bit better to press.

I prefer the .8mm version for my use case.

Printed at .1mm layer height.

The video on this [Reddit post](#) shows the .8mm version: [Quieter SP Membranes : r/SBCGaming \(reddit.com\)](#)
