Summary

Replacement corner bracket for a Logitech Universal Folio. The elastic stayed corner brackets break a lot.

[Gadgets](#) > [Portable Devices](#)

This is a replacement for the corner brackets of a Logitech Universal Folio. The Universal Folio is a tablet computer case with keyboard. It's designed to accommodate a wide range of tablet sizes using corner brackets held with an elastic band. The trouble is the corner brackets break a lot. This is a 3d printed replacement for it, designed to be more robust.

This is the lower right bracket, mirror it to get the upper right.

You have to remove all the screws holding the plate down so you can get to the elastic band end. The original brackets were installed at the factory by melting the bracket. I couldn't get that to work right, so I angled the pins so the strap stays on by tension. You can add some hot melt if you want, but I find this stays on fine without it.
