Print in High Temperature filament like PETG or ABS or better

Bought a broken mixer of Marketplace for dirt cheap, hoping I could fix it.

Found that the speed link lever was melted by the motor heat!

This part was metal prior to 2018 (cost reduction/quicker obsolescence I guess) but I couldn't find a reasonably priced metal replacement so I bought the OEM one for 4-5\$.

Figured I'd model it and share it for anyone to just print it in like 10min for a couple of cents!

There are two models, one is a copy of the original and the other is my 3d printable modified version that doesn't need support and that weird fork at the end that doesn't do anything in the mixer.

I have not tried it yet since I got the OEM part, but let me know if this was useful to you!

Cheers
