### Summary

Combination of silicone and brass brush for cleaning the nozzles

[3D Printers](#) > [Bambu Lab Parts & Upgrades](#)

Tags: [nozzle](#) [cleaning](#) [wiper](#) [nozzel](#)

I have combined two interesting nozzle cleaning approaches in one part.

For cutting the silicone tube please follow the linked version to cut it to size. The silicone hose length is the 19mm version.

Brass brushes can be cut to size for the brushes. I then shortened the brass brushes down to a total height of 17mm.

An adjustment of the G-code is not absolutely necessary A long-term test is still pending.
