Summary

A storage bin or shelf to place on the inside of a kitchen cabinet door.

I made this kind of shelf or bin to place on the inside of a cabinet door and hold sponges and some other stuff

I modeled it with Fusion 360. Then printed it on a Prusa MK4 with translucent PLA. I used 0.2mm layer thickness and 2 lines for perimeter (walls use a total of 4 perimeter lines and no infill). No supports needed.

We attached it to the door with some double sided tape. Make sure the door closes correctly before fixing (don't be me, good tape is hard to remove).
