Summary

A bracket to mount the filament runout sensor for the Ender 3 V3 KE without the spool holder.

Tags: [mount](#) [mountingbracket](#) [runoutsensormount](#)

The ender 3 v3 KE comes with a filament runout sensor but its mounting point is on the tall and honestly pretty ugly spool holder. This is a simple bracket to hold the runout sensor for when you have a custom spool holder and don't want to have to waste all that vertical space. Bolts onto the top of the printer via the same bolts that hold default spool holder in place. For the sensor itself an M3x8 bolt, washer, and nut are recommended for mounting.
