ok so i wanted a mount for Sneaks Articulating Raspberry Pi Camera Mount which is on printables ( <https://www.printables.com/model/3407-articulating-raspberry-pi-camera-mount-for-prusa-m> ) that would attach to either side of my X end mounts and i have installed a Xend mounts with the screw type clamp around the linier bearings and a tensioner , so here it is pretty simple slap together in tinkercad but perhaps someone else is looking for this solution as well, i will have to find the X-end that i printed ( <https://www.thingiverse.com/thing:3082988> ) and I have to give some credit to that design as well as this is what it was made to connect with that .

more pictures to come once its installed and tested.

Updates :

26.07.24 Added another version further spaced out for giving my extruder fan mod more clearance.

Printing :

Print with supports , 30% infill to make it strong and i printed it in PetG .

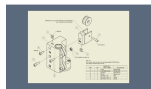

enjoy .
