This girl full body model was made by Revopoint POP. I scanned my model with a 3d scanner to generate a PLY file and then disposed it with 3D Model Process—develop by Revopoint. In the end, I get a unicorn stl file.

If you want to print it with 3D printer, the resin 3d printer will be the best choice. But we can also print it with a FDM printer.

First, we need to lay the model flat in slice software. The filament we can use PLA and the infill on 20% or more, support must need.

I printed it with Creality Ender-3.

If you want to get more models like this, please try to use 3D scanner POP:
