updated 8. 8. 2024 | published 8. 8. 2024

Summary

Basic display mount.

[3D Printers](#) > [Creality Parts & Upgrades](#)

If you appreciate the model and want to donate: <https://ko-fi.com/jaizu>

This display usually comes for very cheap if you buy a BTT Pi 1.2, perfect to upgrade SE to klipper or to replace the Nebula pad on your KE (sashing the main motherboard is required and requires soldering if you dont replace it with a SE one).

To install remove the original mount, use original screws as well.

Print with PETG. 4 walls and plenty of infill to make it stiff
