Description

My printer was sat on a counter top that was not level, so I remixed these specifically for the Kobra 3.

Use to raise and level the Anycubic Kobra 3.

Very stable in use and can be further secured with 4 x M3 screws.

100% use supports for the kobra 3 feet cutout. If using Anycubic slicer you need to disable setting "Don't support bridges" which is normally enabled by default; or use enforcers. Ensure supports are used for the bottom part to avoid a messy thread.
