This is a baby mobile I designed and made for my son. Just need to buy an inexpensive baby rotary music box to make it rotate.

Please consider using strong attachment strings!

You do not want the unit falling on your baby due to poor attachment choices. I use multiple loops of very strong kite strings to attach the central support, but any strong string material that's under 4mm diameter will suffice.

The 5 arms are designed to leverage gravity induced friction, but **please secure each arm with a 4mm M3 socket cap bolt.**

Features:

- 5-arm design
- 2 arm length types

- scalable hub design

Everything is designed to print without support.

Happy printings!
