Summary

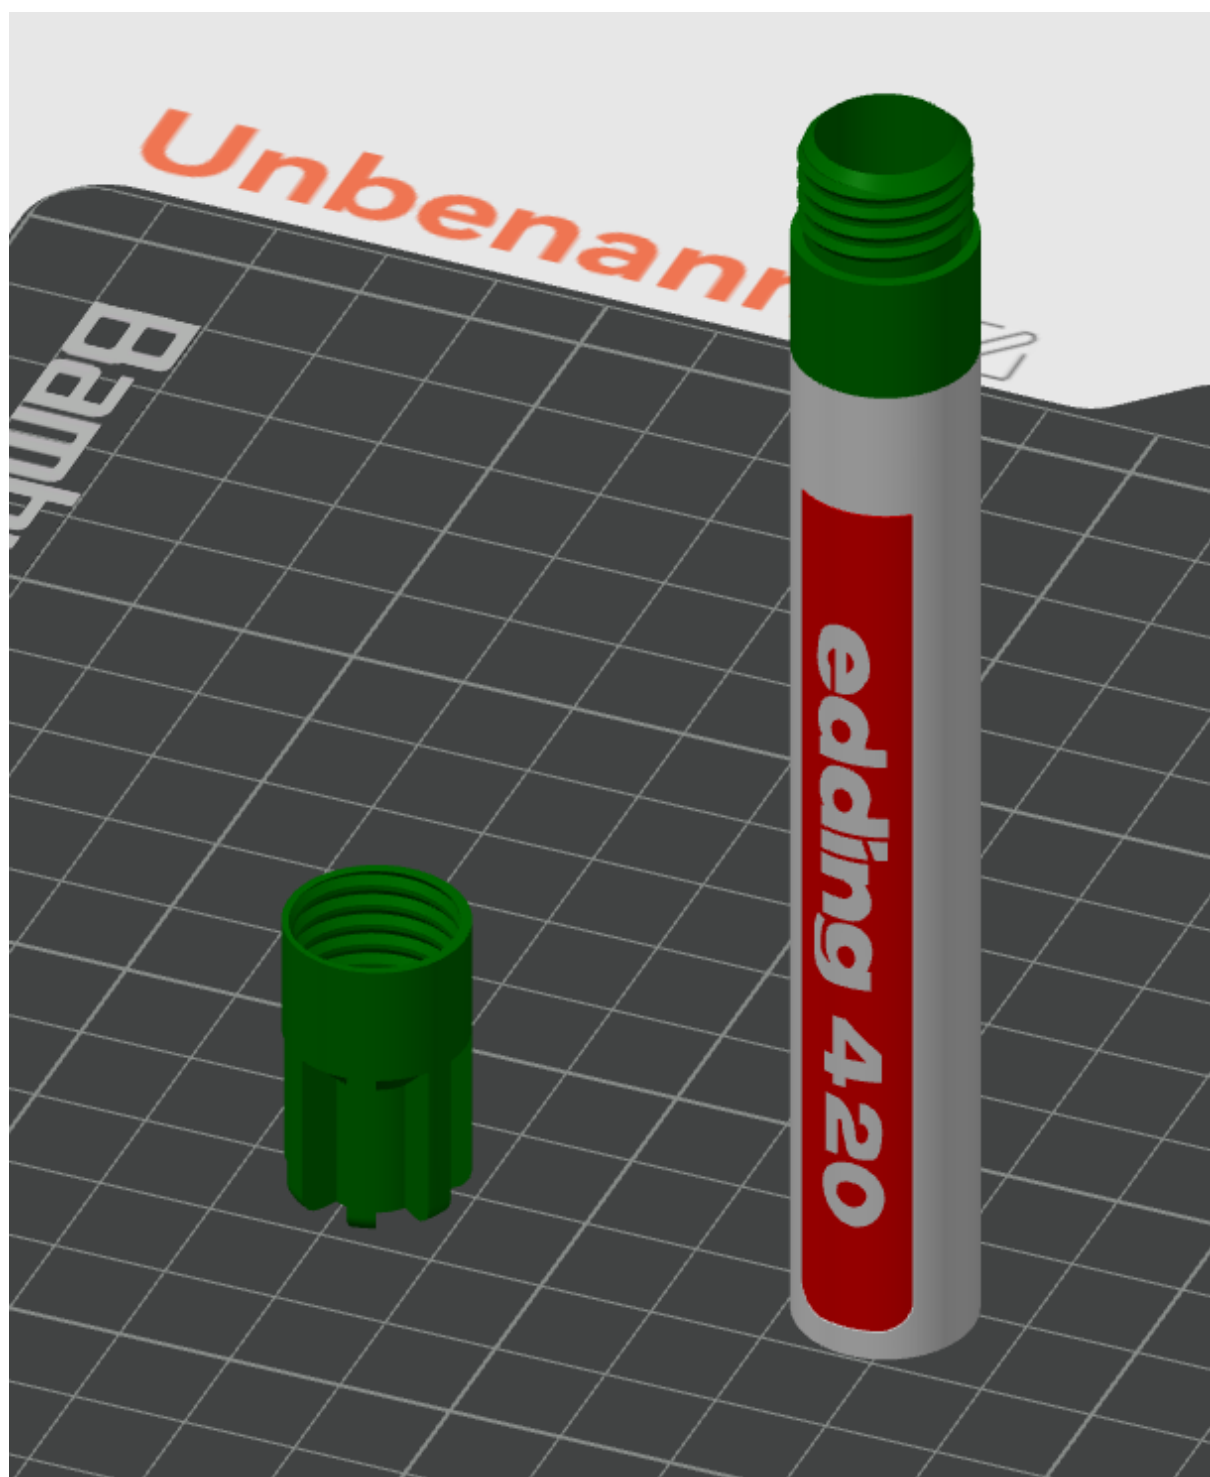

This is a slightly suspicious container for your conical rolled herbs.

This slightly suspicious herbs container in the style of an edding pen is the perfect companion for your conical rolled herbs.

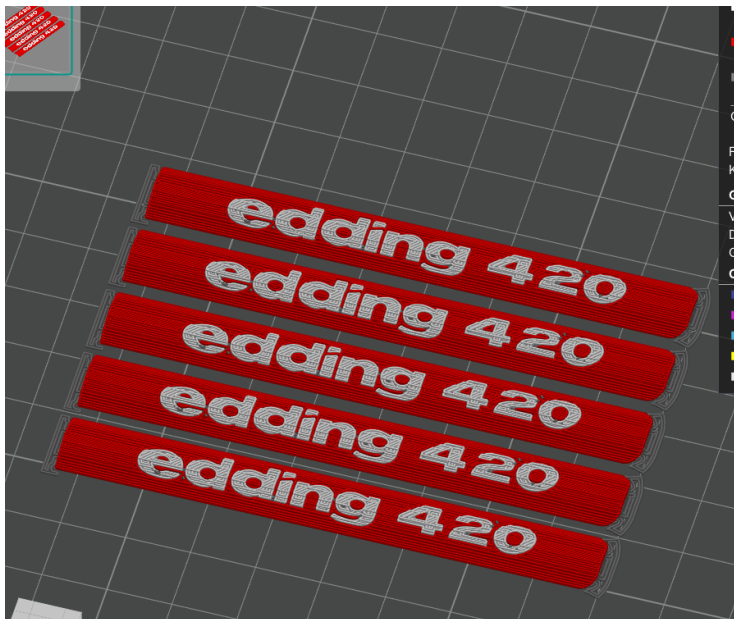

This pen can be printed completely multicolored in one. However, this wastes a lot of filament.

I would recommend printing the pen individually with only one filament change and sticking the lettering in the designated area later.

I would print the lettering flat with a layerheight $< 0.2\text{mm}$.
I have had good results with PETG as support for PLA.
