After 12 years, the water tank cap shattered. I redid it and printed it in PLA, it should hold even if the temperature in the engine compartment is a bit high (but not very high); I think it will soften a bit but it should be fine. If any problems come up I will report it!

Good print!

If you found it useful, and if you like, you can offer me a [coffee!](#), it will be an extra motivation to continue designing.

Print Settings

Resolution:

200

Infill:

60

Filament:

No brand PLA or other As you want

Notes:

Print it with a support of 5 mm at the base and inclined at 30 °
