This set of 2 canisters features a rope design. Both are identical diameters, but they have different heights. Because they share a diameter, the same lid can be used with both.

To ensure that the rope pattern lines up perfectly when the lid is used, I have included notches in the base of the lid that force proper alignment.

### Print Settings

I prefer to print the majority of the canister with no infill. I only used infill on the top 5mm and bottom 10mm.

The following filaments were used in the pictures above:

- Bambu Lab Matte Dark Brown PLA
- Bambu Lab Matte Latte Brown PLA
