It doesn't need supports I just print w a skirt. [Here is the link to the nut, bolt and J shaped holder part.](#) They also have a tablet holder version. Mine was printed with bone colored PLA but it could be printed with PLA, PLA+, PETG, etc. Carefully popping it into the J holder part can be tricky, so scaling down the J holder part a percent or two may be necessary. This holder can be scaled up for thicker phones.
