### Summary

Apparently, Colgate hates people with limited space in their bathroom.

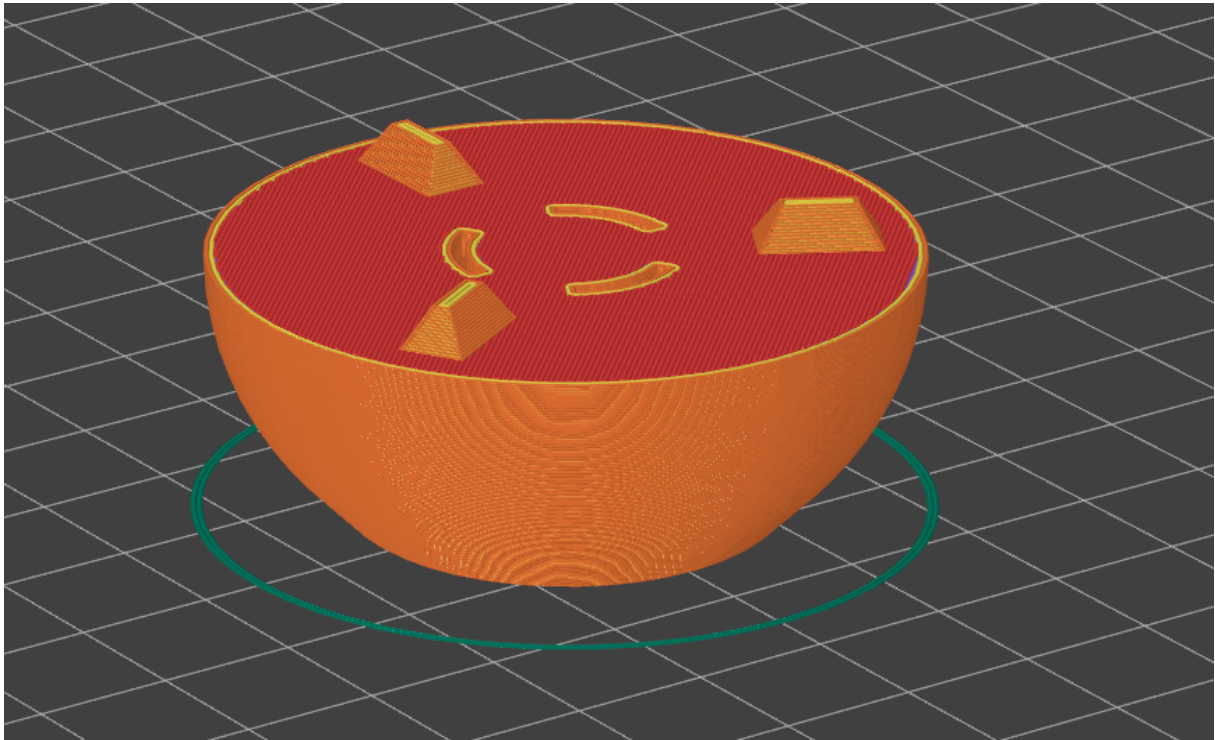

[Household](#) > [Bathroom](#)

For some reason, Colgate Toothpaste tubes have a really small cap, and where with other brands you can naturally put them on your shelf standing upright, with Colgate it's a balancing act, especially if you also have a squeezer frog ( <https://www.printables.com/model/813815-tube-squeezer-frog-no-supports-needed> ) - and don't dare to hit the shelf if you managed it!

So this small print (~13g of filament, including supports) solves this issue by offering a precisely measured hole for the toothpaste to sit in. The hole has 3 drains to prevent moisture from building up when placing a wet cap inside and three feet to prevent stale water from remaining between the part and your shelf.

I recommend to print it upside down, with support only really needed for the internal section. the outside curve is deliberately designed to be printable without support.

Source File included as always :)

Also, yay, my 50th published model on this platform!
