Summary

This is for a book you have with you and maybe have in a bag. It's a protection so it get ruffled up to much.

You have to use OpenScad costomizer to generate the parts. I used material spacing of 0.5mm, it could be clued together, but i decided to go in tailor mode (as you can see i'm not a professional :-P) there are an example of a elektor book's cover uploaded. You can make a finger hole on the side so it's more easy to pull the book out.

When rendering model select outer or inner part and save them as different names.
