Hey makers.
Today i bring you this model that i intend to use as a lamp, it's Hollow and you put a 5v LED lamp (or whatever you might have laying around) inside it.

The original model had a lot of polygons and i simplified it a bit but it still has a lot, so it will take a while to slice, i also made sure to have the horns sit at a nice angle for printing but it might need extra supports depending on your machine and settings.
Definitely use White or a light colored material with not too much infill so that light can pass through.

There's two versions of the model, one has a hole in the back for cables and stuff.

FDM machines should use supports for the eyes.

Good luck!
