Summary

A back cover for the Flirc case my Raspberry Pi Zero 2W sits in, that can be mounted on my mounting Mk4 Side Frame Clip.

[3D Printers](#) > [Prusa Parts & Upgrades](#)

This is a back cover that screws onto the Flirc case for a Raspberry Pi Zero (2W).

It allows hanging it onto some custom mount pegs like the once on my mk frame mounting clip.

I printed with supports on build plate. afterwards just remove the supports in the screw holes with a little knife.
