Based on the very good model of ER605 & OC200 Rack Adapters (V2) by Sorcier, I remodelled them to fit 2x TL-SG2210P. It's a heavy device, and 2 of them in this pair of brackets are recommended to be supported, either by support angles or a more solid rackmount device below them. This is my first attempt at 3D Modelling, and I only made this to fulfill my need of Rack Adapters for my devices, so I apologize if this model isn't suitable for everyone.
