---

I wanted a box to keep my nanoVNA safe & organized when not in use. This is a slide top box with an inner lid to separate the volume into two areas. The bottom section is divided into three areas, a large center space for the unit & calibration fixtures and two small spaces on either side for SMA fittings and adapters for RP SMA. The top section (defined by the presence of the inner lid) is for cable assemblies.

I also included a couple of touch screen stylus designs. The small one was intended to go in the box. It serves double duty, working both as a touch screen stylus and to help scoop out SMA adapters from the side pockets that are a pain for me to grab with fat fingers.

This thing was made with Tinkercad. Edit it online
