Summary

Overlapping storage to make better use of space in storage for laying down pliers.

I had some pliers that didn't quite fit with some of the other designs for flat storage in drawers so I made a base for several sets of pliers to be able to nest into one another and make more efficient use of the space. The handles for one stick out past the base and use empty space on the next one in the chain, and have room for longer needle-nosed pliers to stick out ahead into the next one.
