What's even better than a trip to the beach? Surfing the air while on your way there.

With this collection of FingerSurfboards you can enjoy the ride to the beach in style.

Print your favorite style of board, tie a piece of string through the hole as a leash to secure the board to your finger and Carve some air while being a passenger on any roadtrip. Get Stoked man!

How about grip?

Well, there are a couple of options. You could just rock these boards nekkid man or if you'd like to go the skateboard route, you could buy yourself some Anti-Slip tape in 5cm or approx 2 inch width. Amazon sells rolls in black or transparent.

Or you could put a teeny tiny layer of epoxy on the deck and sprinkle it

with coarse salt.

Take your pick. ;-)

But wait...

If printed flat. How do i get a bit of rocker in my board, man?

That's Simple Bro

We mostly print on metal sheets nowadays.

When your print is finished, grab the plate while still warm and slightly bend the edges upward to achieve a bit of rocker. The tricky part is to keep the plate slightly bent for a minute or two untill the print pop's off while maintaining the curve.

Pro Tip : If printed in PLA, don't leave it in your car.
Stash it somewhere cool so it will not deform. A coolbox for your
drinks maybe?! XD
