Summary

a clean-dirty flip sign that can be printed in two or three colours.

[Household](#) > [Kitchen](#)

Tags: [dishwasher](#) [dishwashersign](#) [cleandirtysign](#)

designed in blender.

printing deets:

- all three stl files are required and are printed at the same time, nested to fit perfectly together.
- the rectangle, dirty-background, is printed inside of the sign. there is no 'slide in the side' feature and that image was used to highlight how the 'dirty' gets its colour. the print-in-progress photo shows the rectangle placement.
- print 'clean' side down to avoid use of supports
- PLA
- 0.4 mm nozzle
- 0.15 mm layer height

(your print can look much nicer than mine. an ancient slicer was used so that the dual capabilities of the elegoo neptune 2d could be utilized. among other things, this meant no ironing and a generally messier print.

did the brand-new build plate lead to the strange colour on the clean side?)

Model files

sign-dirty-background.stl

|| print using colour choice 1 - white in my photos

sign-clean-text.stl

|| print using colour choice 2 - white in my photos

sign-main-body.stl

|| print using colour choice 3 - black in my photos
