---

Insert-and-twist attachment for an 80mm diameter (outside), solar light from Temu, with separate wall fixing.

The pink one with a straight seam quite visible, the blue one with a seam in a free position that gave it an interesting look in my opinion.

Size is about H140mm, W164mm

I have printed them all on MK4, with PETG from Prima EasyCreator.

InputShaper 0,20mm. You can probably get better print results with better settings.

I attach two hooks. One with a tolerance of 0.1mm, the other with a tolerance of 0.05mm for tighter insertion.

Write to me if you think something could be improved.
