I got the logo online and converted to svg format to be exported to Fusion 360. This logo consists of two parts: the logo crest and the CRF lettering. The size of the logo is 180 x 145 x 3.8 mm

This is my approach to avoid the layered color pattern when switching filament. It looks much cleaner.

Change filament for the logo crest at the following layers:

- Start with red color
- Gcode to change filament at layer 10 for black
- Glue the separate CRF letters (white color) on the crest
