### Summary

A modified mount that lets the NH36 cable wrap around and be secured next to the mount to take stress off the connector

This is a remix of one of the WWG2 mounts that removes some features I didn't want to use and added a small section on the side to secure the cable too. This takes stress off of the connector since the wires have a few centimeters between the connector and the jacketing. This mount should accept most zip ties. I wanted to have the cable coming out on the right side to use the space from the offset of WWG2.

You will need 2 M3 heat inserts (voron standard) and 4 M3x8. You can use socket or button depending on your taste.
