Tags: [diy](#) [onewheel](#)

3D **printing files for the DIY VESC Lenco Wheel (onewheel).**
To be **used in combination with Lenco Wheel frame kit.**

(framekit is currently unavailable, only completes where sold, message me if your interested in either the plans or the kit)

These parts are functional so print them strong.

I have the best result with eSun PA-CF but use what you can.

A layer height of 0.24 is enough for most people and walls are more important then infill.

The holes are meant to be tapped but you can drill and add heated inserts for a luxury finish if you like.
