### rotatory dial phone - with rotating dial!

It was originally a project I did to improve my 3D modeling skills, and I wanted to share it with the world! so I did.

- **printing:** it wasn't exactly built with the intention of it being 3d printed but I have printed it and it works so good luck. (the settings don't matter most of it doesn't need support and you can use any setting you like)
- **assembly:** it's pretty self-explanatory, you just put the dial on the rod coming out of the phone stand and then close it with the cap so it won't fall off (no need for glue).
