Just another quick filament sensor mount for the BTT SFS V2. I looked around and didn't quite see what I wanted, so I did a quick part you might find useful. It's designed for a 3030 extrusion, in my case a RatRig Core 3.1 500. I've placed it on top for quick loading of multiple spools but you could place it in many other spots.

This part has holes that will fit BTT hardware and has strain relief for your wires. It does not require any supports (really).

Enjoy.
