Have you lost or broken the pieces needed to secure the platforms in your Zeno cage? Fear not! Here are replacement parts that will allow you to firmly attach your platforms again!

The 3D printed parts are compatible with the original parts, meaning that you don't need to replace both parts. You could use a 3D printed bolt with an original plate or an original bolt on a 3D printed plate.

No support required, but since the layer lines are horizontal, try not to overtighten the bolt or it could break in half. I recommend using a material that has good inter-layer adhesion such as PETG or ABS rather than PLA.
