Summary

A simple calibration cube that shows more than just a cube! Should be an easy print for any printer.

Tags: test calibration cube overhang calibrationcube 20mm cbuilds

please comment if you want a model with curved or slightly smoother edges.

This is a calibration cube which all sides should add up to 20mm which you can use to fine tune your 3D printer using digital callipers and it also includes a few extra overhangs on the side featuring a 45 degree overhang and a 70 degree to help test each filament and printer or certain settings. Please have a look at some of my other designs and feel free to share this file or use it for anything such as commercially or whatever. I call it the Build Cube as my Brand, CBuilds, has Build in it. This is a great and easy print which should work on just about any printer and I would love it if this soon becomes your go to test print. Also, please give me feedback on my designs and iterations so that I can make them really good for all you guys.
