### Flexi T-Rex Dinosaur!

A beautifully articulated model that brings a Trex to life with fully movable parts without any support. This detailed model comes with a jaw that can open and close, a head that can turn, and articulated arms, feet, and tail. Plus, it's designed to stand on its own, making it both a striking display piece and a fun toy to interact with.

The Flexi T-Rex is designed as a plug together model, you print the body, head and jaw separately, but you can easily assemble it together.

Please feel free to share pictures of your prints, I'd love to see them!
